

ROBOTIC MOWER SERVICE MENU

Your robotic mowers devote hundreds of hours a season keeping your lawn looking the best it can. Because of this we at Sims strongly recommend it is serviced annually to prevent downtime during the peak of the season when you need it most. To prolong the lifetime of the lithium ion batteries in your robot, the correct winter storage is also very important - our Silver and Gold service packages include the correct storage of your machine, where it will be kept on charge and in a warm and dry place. Our Gold package also includes collection and delivery of the robot and on its arrival will be correctly installed and fully tested on your lawn, ready to begin another season.
